Summary

Data Analyst and AI Data Annotation Specialist with hands-on experience in autonomous vehicle dataset validation, predictive analytics, machine learning workflows, and data visualization. Skilled in Python, SQL, Power BI, Tableau, and statistical analysis to transform complex datasets into actionable insights. Experienced in data cleaning, exploratory data analysis (EDA), annotation quality assurance, and AI model support for large-scale datasets. Seeking opportunities in Data Analytics, AI Operations, and Data Validation to drive data-driven decision-making and operational efficiency.

Education

DR. D Y Patil College of Engineering and Innovation

B.E Artificial Intelligence and Data Science

Pune

June 2025

Rajiv Gandhi Polytechnic

Diploma in Computer Engineering

Udgir

May 2022

Experience

Zensar Technologies Limited

Jr Associate Process Executive/ DE-A

Oct 2025 – May 2026

Pune

- Worked on large-scale Autonomous Vehicle datasets to support machine learning model training, validation, and AI model optimization.
- Created step-by-step reasoning traces and structured command-style annotations to improve LLM comprehension of driving logic, traffic analysis, and safety-critical decision-making.
- Interpreted complex traffic scenarios and translated them into deterministic, structured explanations to enhance AI-driven human-like decision-making capabilities.
- Collaborated with AI model trainers and cross-functional teams to refine annotation guidelines, improve data annotation accuracy, enhance trace clarity, and support high-quality dataset development for machine learning systems.

Maxgen Technologies Pvt. Ltd.

Python with Data Science Intern

Dec 2024 – Feb 2025

Pune

- Worked on data analysis and machine learning projects using Python, Pandas, NumPy, and Matplotlib.
- Performed data cleaning, data preprocessing, and exploratory data analysis (EDA) on structured datasets.
- Developed a stroke prediction machine learning model using healthcare datasets to identify patient risk factors and predict outcomes.
- Created data visualizations and reports to identify trends and support data-driven decision-making.

Elite Software

Python Django Developer Intern

Jan 2024 – Mar 2024

Pune

- Developed web applications using Python and the Django framework with backend development and database integration.
- Implemented user authentication, forms, and CRUD operations for dynamic web applications.
- Designed responsive user interfaces using HTML, CSS and Django templates.
- Managed database operations and backend data processing to support web application functionality.
- Tested, debugged, and optimized web applications to improve performance and user experience.

Projects

AV LLM at NVIDIA

Autonomous Vehicle AI Dataset Annotation Project

- Annotated and labeled camera, video, LiDAR, and RADAR datasets for autonomous vehicle perception systems.
- Followed project-specific annotation guidelines and labeling standards to ensure data accuracy and consistency.
- Validated auto-labeled outputs and corrected annotation inconsistencies to maintain high-quality training datasets.
- Supported AI model training by improving dataset reliability for autonomous driving scenarios and edge cases.

Stroke Prediction System

Machine Learning Healthcare Prediction Project

- Developed a machine learning-based stroke prediction system using Python, Pandas, NumPy, and Scikit-learn.
- Developed predictive models achieving accurate stroke risk classification using healthcare datasets.
- Applied statistical analysis and visualization techniques to identify patient health risk patterns.
- Improved analytical insights through data visualization and model evaluation techniques.

AI-Powered Personal Assistant

AI Chatbot and Virtual Assistant Project

- Developed an AI-powered chatbot using Natural Language Processing (NLP) techniques and OpenAI models.
- Designed conversational workflows to automate user interaction and personalized task assistance.
- Integrated AI-based response generation to improve user engagement and interaction efficiency.

Facial Recognition Attendance System

Python and OpenCV Based Attendance Automation System

- Designed and developed a facial recognition attendance system using Python and OpenCV for automated attendance tracking.
- Implemented face detection and recognition functionalities for accurate user identification and attendance management.
- Built a user-friendly interface for attendance management and real-time monitoring.

Technical Skills

Programming Languages : Python, SQL

Data Analysis & Visualization : Power BI, Tableau, Advanced Excel, Matplotlib, Statistical Analysis, Data Visualization

Machine Learning & Analytics : Predictive Modeling, Data Pre-processing, Exploratory Data Analysis (EDA), Machine Learning

Libraries & Tools : Pandas, NumPy, Scikit-learn, Jupyter Notebook, Google Colab, VS Code

Data Annotation & AI Tools : LiDAR/RADAR Data Labeling, Dataset Validation, AI Data Annotation, NVIDIA HL2, Maglev

Database Management : MySQL

Certification

Python with Data Science : Maxgen Technologies

Python-Django Framework : Elite Software

Programming with Python Training : Intershala
